

LaboSafe

Water Treatment / Industrial Safety

Water Treatment

LaboSafe is distributor of several products in the field of water treatment. We are thereby in a position to answer, using high technologies and processes, a large scope of needs, with our own products as well as with those of numerous partners.

Our services cover the engineering and planning of the best possible solution, the supply of the equipment and, on request, the installation.

Among the water treatment processes we distribute and install, following can particularly be mentioned:

- Disinfection systems using UV rays
- Ozone generation systems
- Filtering
- Chlorine treatment

We are in a position to propose treatment for :

- Waste water
- Industrial waste water
- Drinking water
- Process water

And thus eliminate contaminants such as :

- Microorganisms and other persistent microbiological or organic contaminants
- Lead, Nickel, Mercury and other metals, metalloids and metallic ions
- Emerging micropollutants, such as antibiotics, hormones and other pharmaceutical products
- Fertilizers and other industrial chemical compounds
- Foaming reduction in wastewater treatment plants
- etc...

The products we distribute, as well as those of our numerous partners, allow us to include all required equipment in order to optimize and control the processes we install, such as :

- turbidity meters
- flow meters
- dosing pumps and valves
- etc...

We also offer efficient maintenance, repairs, spare part replacements and whatever is required to insure a proper operation of our installations.

Industrial security

LaboSafe is the exclusive distributor in Switzerland of GIA emergency showers.

GIA is the leading manufacturer in Sweden, famous for excellence in quality and security, of emergency showers and eye/face wash units and has since the early 1990s continuously developed new types of showers.

The production from GIA is certified according to ANSI Z358.1-2004.

LaboSafe can thereby offer one of the widest range of eye/face washes units, safety showers, as well as safety mixers.

EyeSpray is a new type of portable and stationary eyewash system, using spray bottles, allowing an efficient and simple protection of the eyes in locations where access to water may be limited.

EyeSpray has been developed in Sweden and is protected by a number of patents. The product is currently distributed in several countries in Europe

In the fields of security and hygiene, LaboSafe also distributes Chimia products, among which :

- Ozoclean : A compact ozone generator allowing to efficiently and rapidly disinfect, sterilize and decontaminate food, instruments or recipients, in food industry but also in many other fields such as pharmaceuticals, microelectronics, etc...
- Ozosafe S : An electrolytic ozone generator used for disinfection of hands or medical equipment.
- Ventozone : A portable ozone generator used for air treatment, insuring room disinfection and deodorization.

LaboSafe

As a company of the Hildenbrand group, LaboSafe is an exclusive distributor in Switzerland, of several products in the fields of industrial security and of water treatment.

Hildenbrand group

Founded in 1878, Hildenbrand has been active for many years, with the experience, skills and quality numerous clients appreciate, as an industrial piping contractor. We benefit from valuable experience and goodwill acquired through working for many pharmaceutical, chemical, food and microelectronic industries.

Synergies, engineering, distribution and installation

Our clients do not wish to have to coordinate several contractors and suppliers. They want to have as few partners as possible

- if possible only one
- that can provide efficiently the expected result.

LaboSafe and Hildenbrand implement the required synergies. In that respect, thanks to our distribution activity, our installation activity, and our engineering staff

- working with other specialized engineers if necessary
- and our sub contractors and partners

Our clients have been totally relieved of that concern.
